AGENDA

Report Profile

01

Overview of IoT ecosystem

02

IoT Application by Industries

03

Service Provider engagements and opportunities

Topics Covered:

- Global IoT Market overview
- Trends & Challenges
- Key Industries using IoT
- Major IoT application segments
- Industry adoption by major IoT areas
- Digital Maturity of IoT based Use cases

Topics covered in the Snippets Report

Topics covered only in the Full Report

Send your requests to info@draup.com to receive the Full Report

Global IoT Market overview: Rising need for data to drive the innovation of digital technologies is surging the investment for IoT solutions

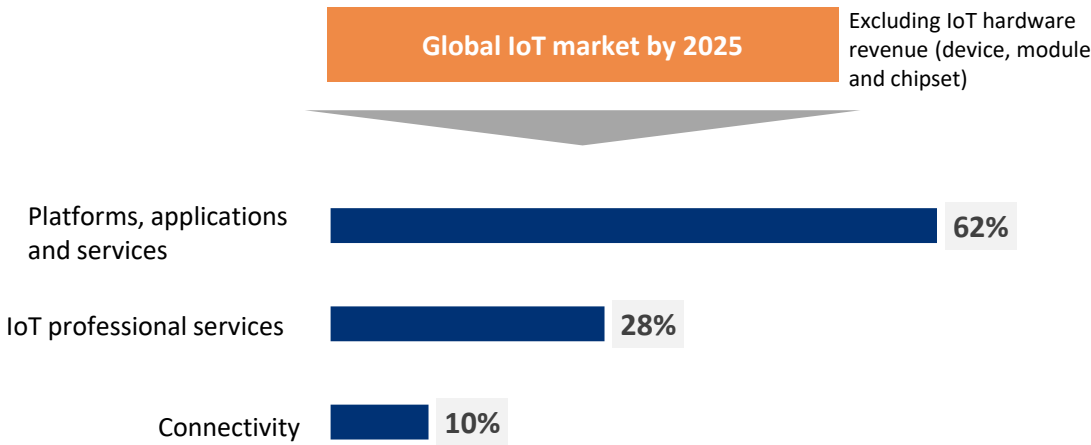

Global IoT Technology Spend by products & services(2018 -2023)

- The overall IoT technology Products & Services spend is expected to grow by 20% YoY from ~\$201 Bn in 2018 to ~\$500 Bn by 2023 .
- The spend of IoT technology products refer to hardware products like Sensors, chips, storage/ server infrastructure as well as IoT platforms
- IoT technology services refer to IoT Strategy & Consulting, IoT Engineering, IoT System Integration & Deployment, Managed services & support

Global IoT market future forecast

US\$1.1 – 1.2 Trillion

- IoT professional services market will continue to have incremental growth as the ecosystem matures and scope for digitisation in traditional industries broaden
- Region wise push of government for Smart Infrastructure, Energy saving solutions, Worker safety solutions and increasing cost of assets and components are the major growth drivers for IoT adoption across industries
- Asia Pacific region is forecasted to become the largest global IoT region in terms of both connections and revenue by 2025

Trends & Challenges: Edge computing, Cloud computing & 5G are going to enable real time IoT use cases across industries; Security & Data Integrity are immediate concern for IoT adoption

Major Trends in IoT technology

Edge Computing: Edge computing is outperforming the Cloud when it comes to faster processing and cost. Data processing with the Edge Computing will exist with the Cloud for the betterment of IoT as Faster processing of data is prominent in all the smart devices

Cloud Computing: Infrastructures for Data Protection is going to be one of the most important security trends. Cloud will complement IoT devices like keep the record of the hackers, robbers, etc.

5G : 5G standards are going to offer more potential for IoT devices, with mobile communication for embedded devices benefiting from the drastically reduced latency and reliability

Predictive Maintenance Boost : The scope for Predictive maintenance is going to broaden at consumer level owning IoT products and will find traction in new industries like aviation, agriculture etc.

IoT integration with blockchain: Data acquired from blockchain IoT devices will be reliable and secure, blockchain distributes this data throughout devices connected to the chain, making malicious or accidental modification of data impossible

Energy management using IoT: As the smart city concepts become reality and the regulatory bodies are imposing norms for energy saving, the use of IoT in physical all the physical Infrastructure will become inevitable for autonomous energy conservation

Major challenges in IoT technology

Security: Data security and privacy is a challenge for IoT industry as companies use a wide array of IoT devices so data is constantly being harnessed, transmitted, stored and processed leading to potential risks of digital burglary, malware ingestion, and data breaches

Connectivity: No proper Internet connectivity is one of the many challenges faced by industries in IoT adoption. There is a need for powerful and reliable network connectivity as networks grow to join billions and hundreds of billions of IoT devices

Immature Infrastructure: Due to continuously growing data in real-time, companies need a sustainable solution for data storage. Companies require right infrastructure that manages IoT connected devices, sensors, and data

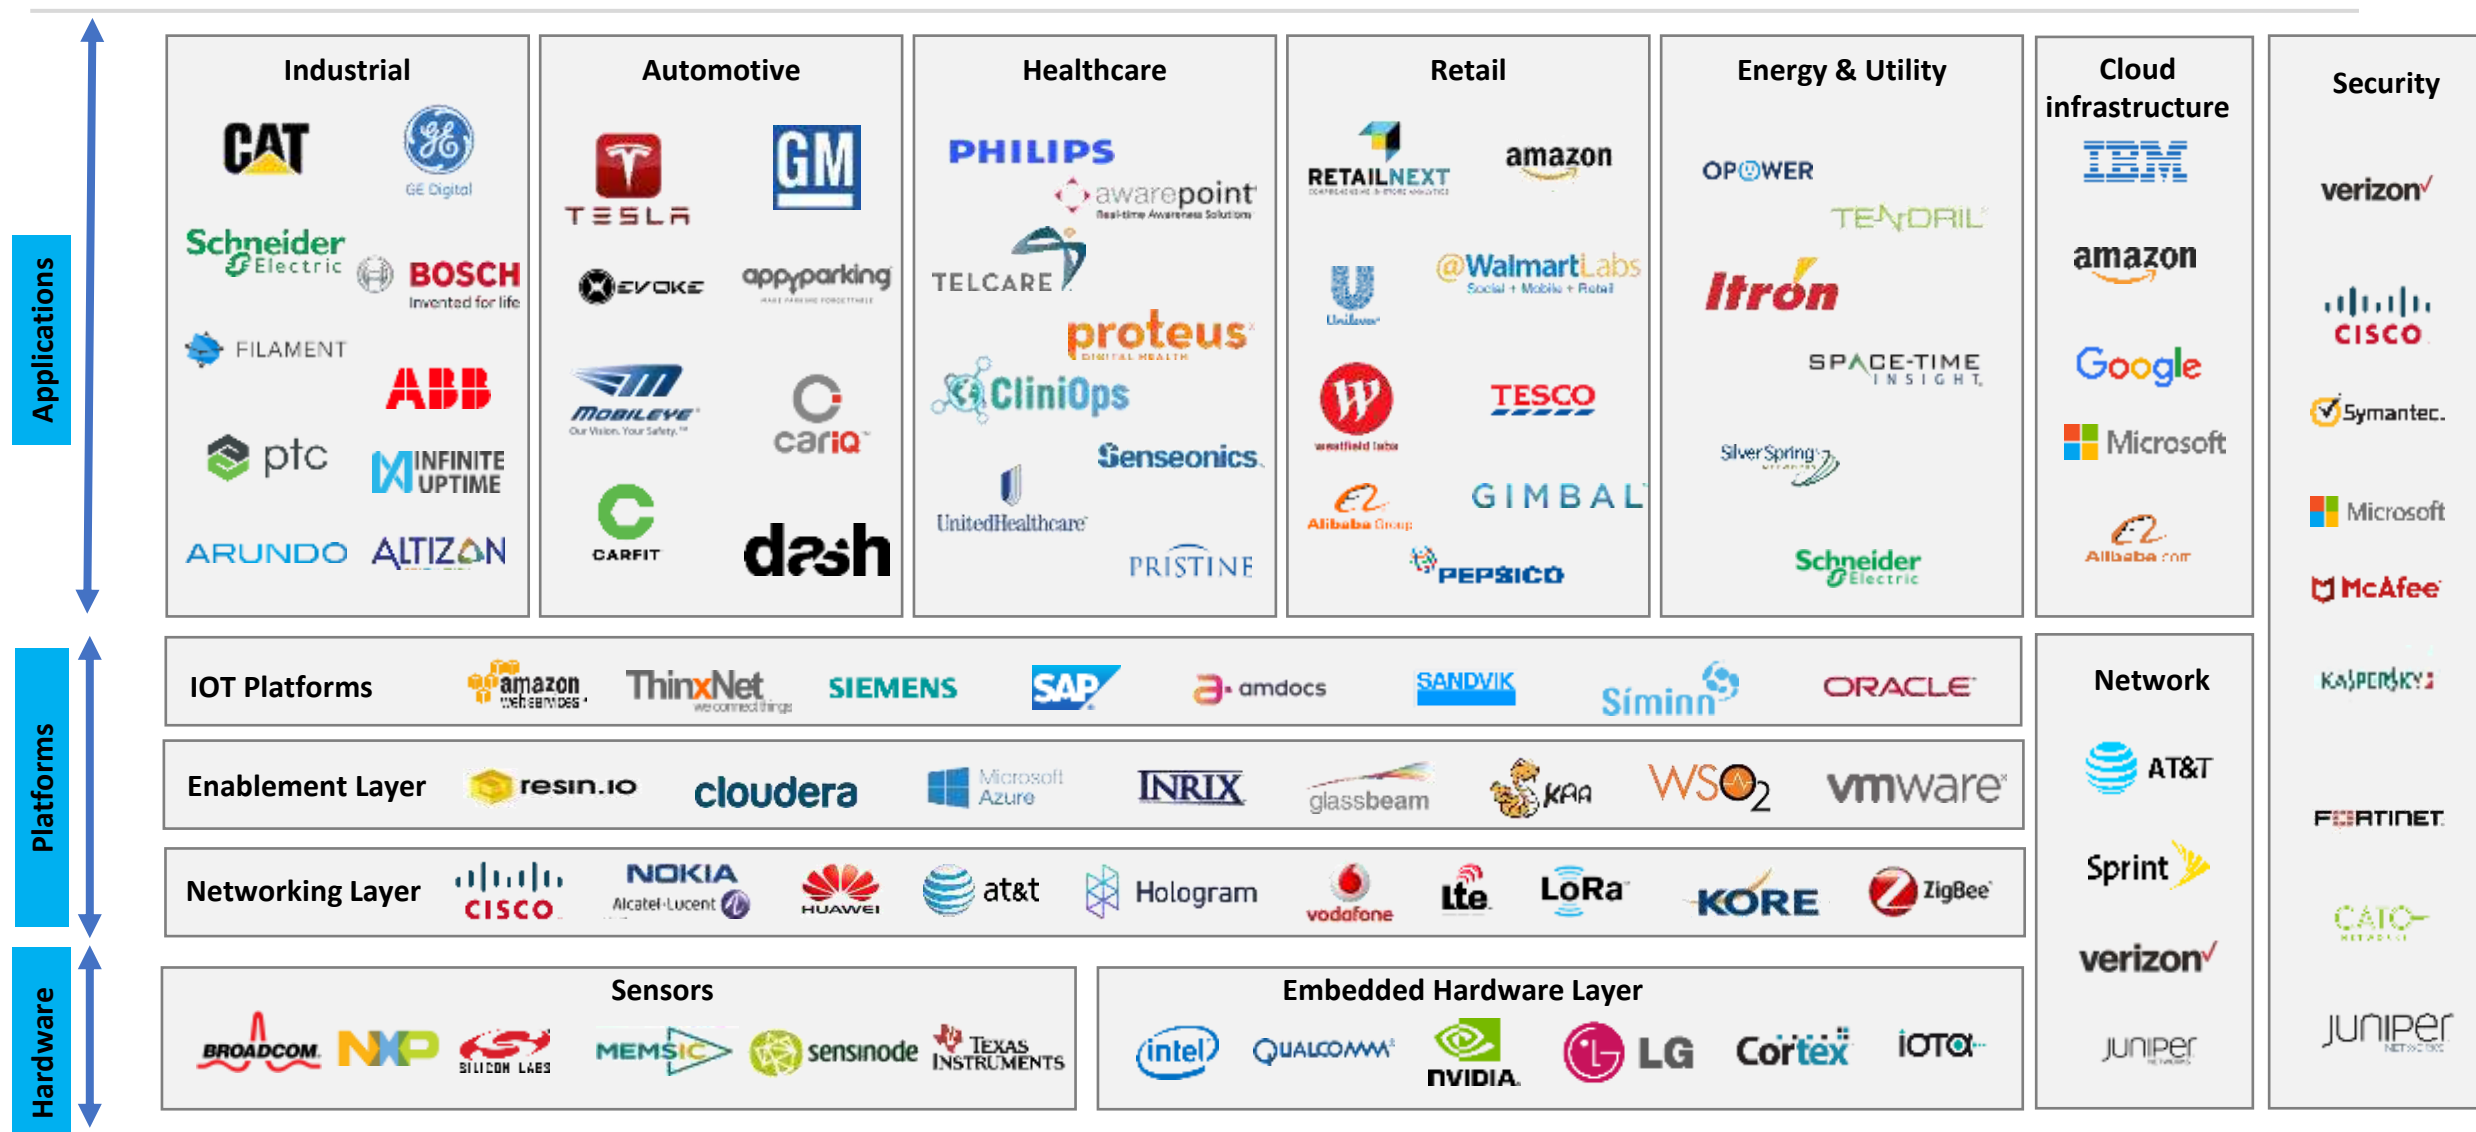

Data Integrity: Data integrity is a challenge for companies that use IoT or cloud. With so much data coming in from multiple sources, it's tough to separate useful and actionable information

Government Regulations: Businesses are hesitant in adopting widespread adoption of IoT as they are waiting for government officials to intervene with new standards and regulations for IoT

IOT Ecosystem : Players across IoT value chain in the ecosystem are capitalizing on growing convergence and collaboration in the value chain to move beyond core offerings

Top Industries using IoT : Capable industries have started to realize the ROI on IoT deployment and are planning for wide scale adoption across their value chain as the need of digitization increases

Industrial: Companies are leveraging IoT solutions in areas of Connected robots, IoT-Enabled Predictive Maintenance and to develop a digital replica of their business assets (digital twins)

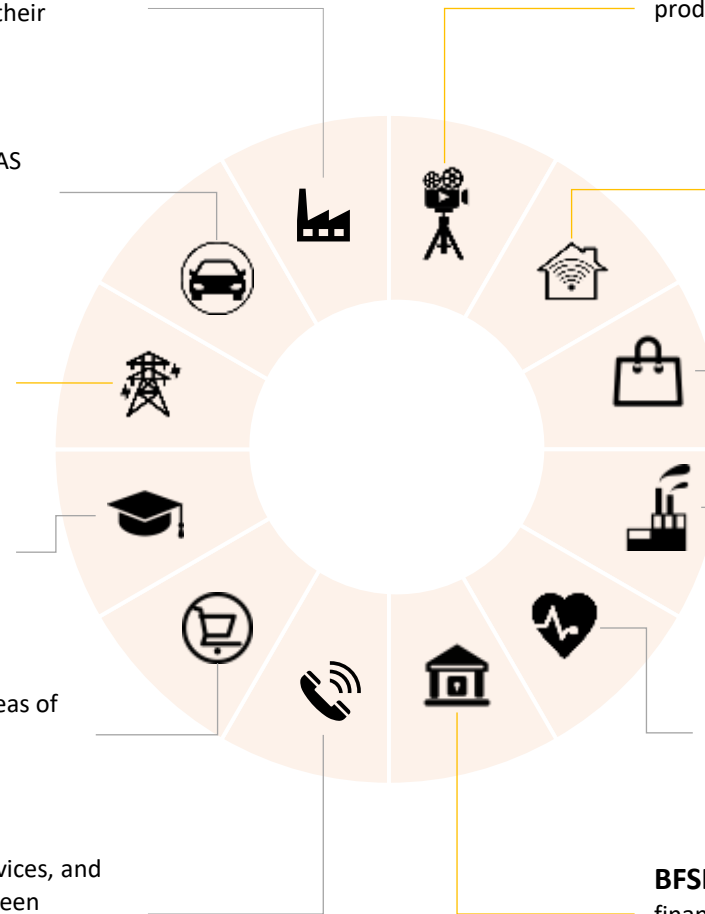

Automotive: Firms are focused in advancing safety solutions like ADAS ,improving Telematics offering, smart manufacturing and warehouse optimization

Energy & Utility: IoT technology is being deployed by utility in smart meters, smart grids and smart energy management solutions owing to energy regulation norms by government

Education: Academic institutions are focused on providing education of future by providing for smart Classrooms, smart labs, smart training for students

Retail: IoT solutions are used by top retail companies mainly in the areas of improving Customer experience, inventory management and shelf monitoring to analyze the demand of fast moving products

Telecommunication: Companies are leveraging sensors, mobile devices, and Internet connectivity to boost interactions and obtain data points between physical and nonphysical objects and also provide offerings like Remote SIM Provisioning

Media & Entertainment: Media companies are using IoT for tracking products, Operation and warehouse tracking and customer experience monitoring

Home Automation: IoT smart home solutions are changing the lives of people by providing smart products and giving autonomous control remotely to the customers like Voice assistance

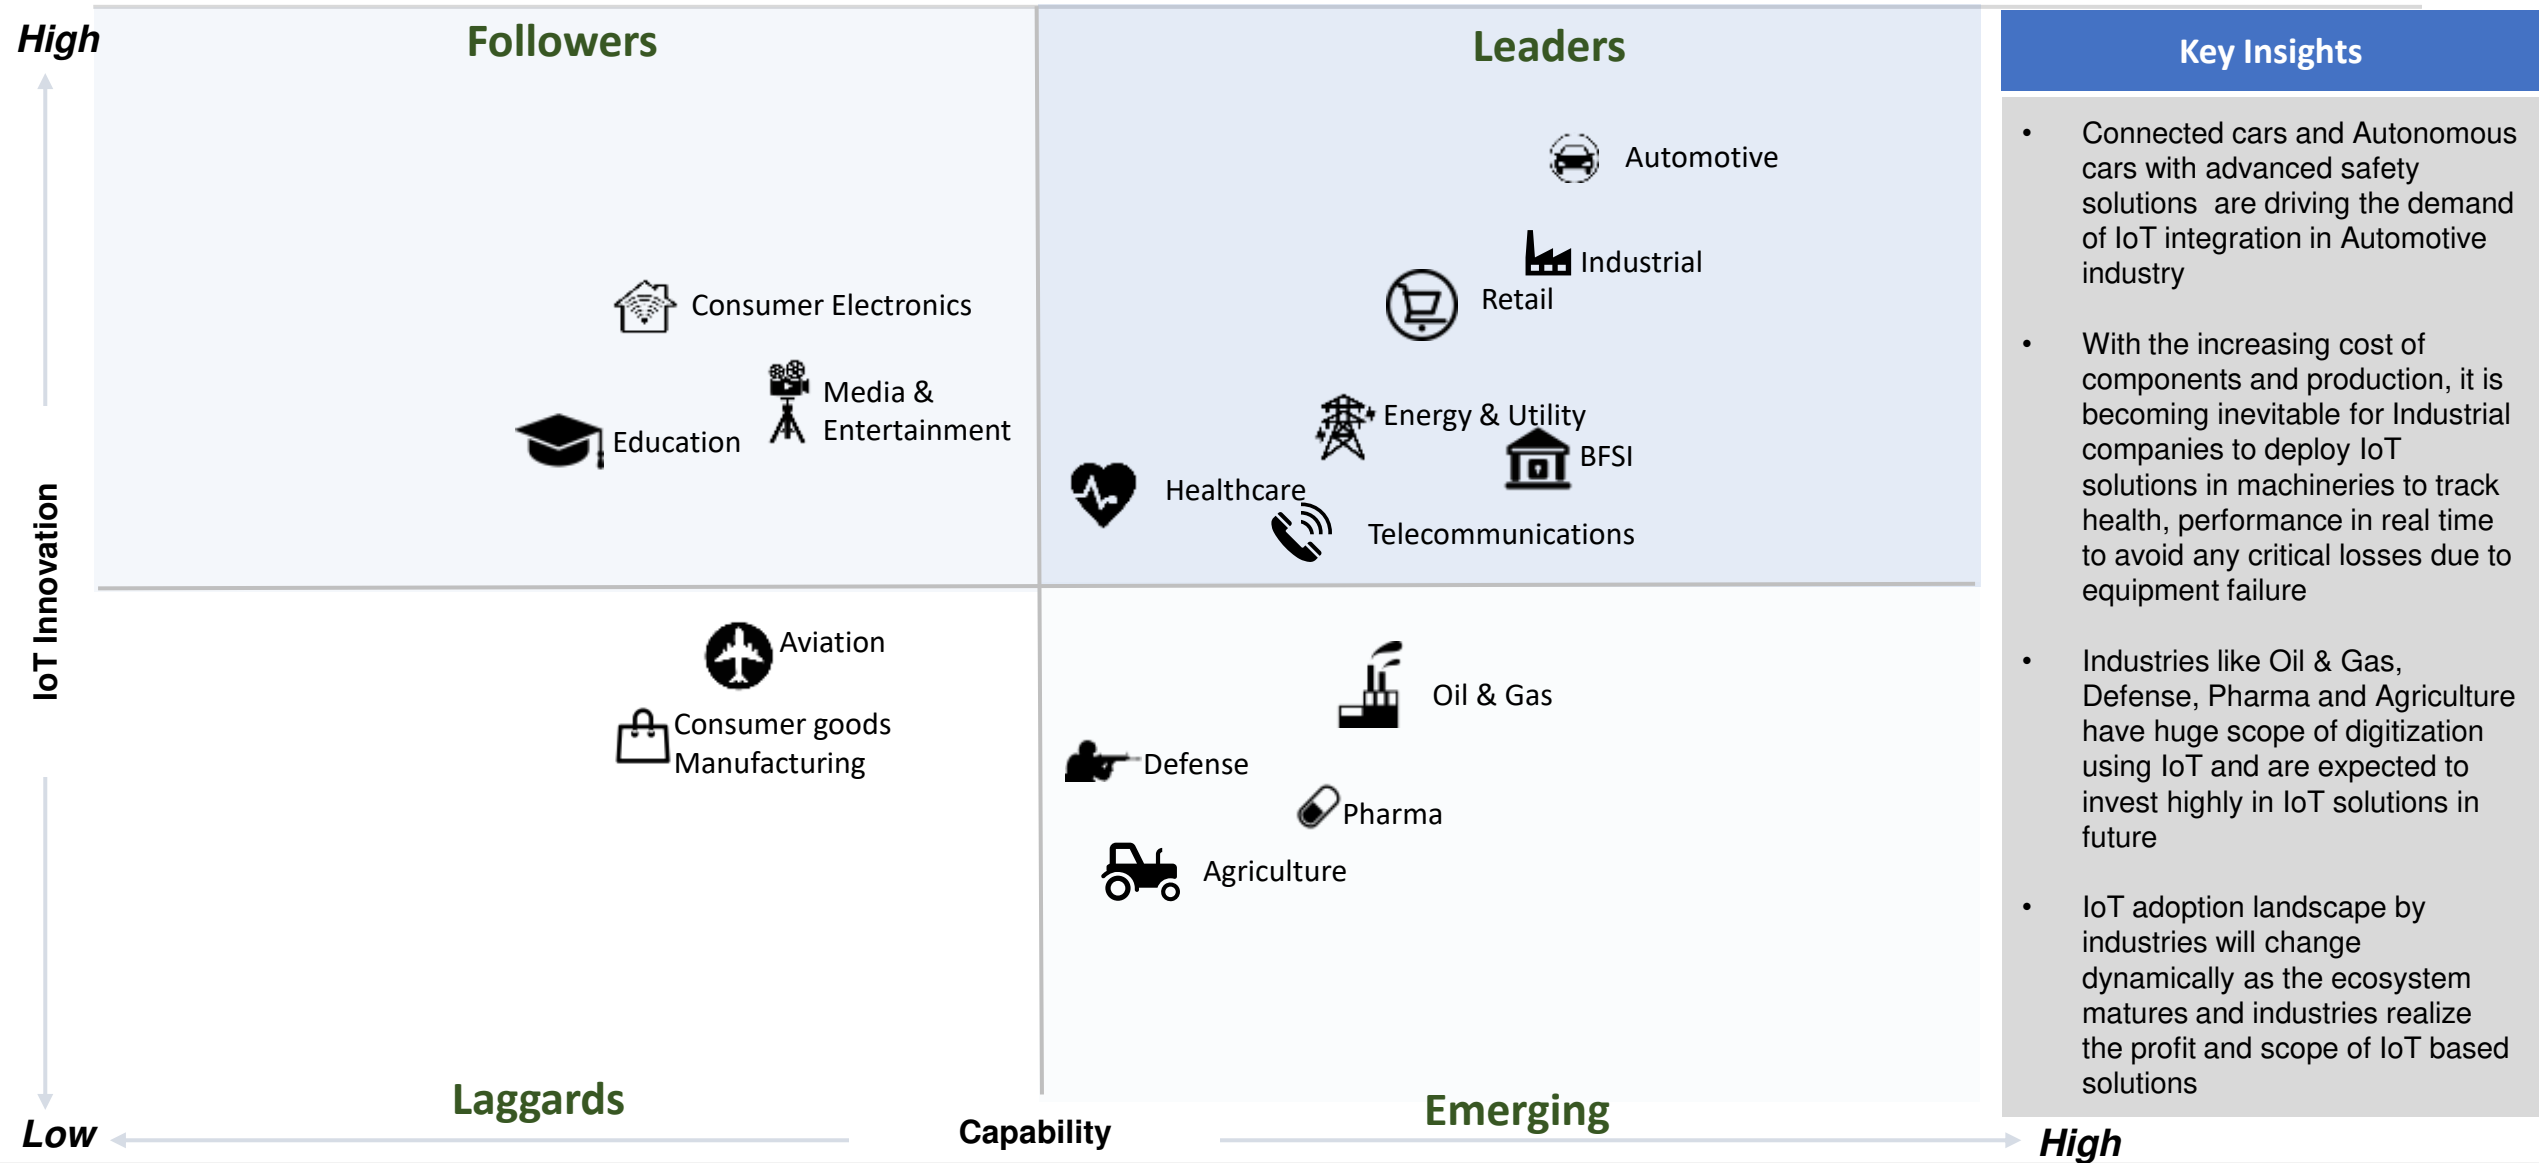

Consumer goods Manufacturing: Companies are using IoT solutions in Quality control, Logistic management, Inventory movement control and distribution center management

Oil & Gas: IoT is being used by O&G companies for fleet monitoring solutions, leak detection, well/ tanker monitoring, refinery monitoring, Preventive maintenance to avoid losses

Healthcare: IoT has a major impact on healthcare as it helps institutions and doctor gather huge amount of data from patients remotely and diagnose accurately

BFSI: Banking, Financial services and Insurance firms are providing tailor-made financial products like Usage based Insurance by monitoring customer behaviour in real time and improving the overall experience

IoT adoption intensity by Industries: Connected cars, Smart manufacturing and Connected supply chain solutions are driving parallel innovation across Auto, Industrial and Retail verticals

Major IoT application segments: Companies are building IoT framework that balances end to end use cases across all segments to achieve quick ROI

	CONNECTED ASSETS	CONNECTED PRODUCTS	CONNECTED LOGISTICS	CONNECTED WORKFORCE	CONNECTED CUSTOMERS
*POC	Industrial assets like heavy machineries with very high value and critical for enterprise operations	Products like cars, smart meters which are used at consumer level and used on day to basis by customers	Supply chain management components like Fleet, Cargos, Inventory, Warehouse	Workforce refers to Internal employees, Field workers or labors or On-site personnel	The end customers of respective industries availing direct products/service and post sales benefits from companies
Automotive	<ul style="list-style-type: none"> Real-time Fleet management Vehicle Theft Alert Preventive Maintenance 	<ul style="list-style-type: none"> Over-the-Air Updates Platooning Advance Navigation Assistance 	<ul style="list-style-type: none"> Cargo Monitoring Fleet Tracking Smart Parking Warehouse Optimization 	<ul style="list-style-type: none"> Vehicle Field Servicing Driver Logs 	<ul style="list-style-type: none"> Automated Service Alerts Roadside Assistance Threat Alert System Over-the-Air Updates
Industrial	<ul style="list-style-type: none"> Location Monitoring Asset Performance Management 	<ul style="list-style-type: none"> Smart Industrial Products Self-guided maintenance 	<ul style="list-style-type: none"> Stock Monitoring Warehouse optimization Route Planning and optimization 	<ul style="list-style-type: none"> Smart accessories Remote Personnel monitoring Geofencing 	<ul style="list-style-type: none"> Usage-based maintenance Remote servicing
Retail	<ul style="list-style-type: none"> Smart shelves Theft Alerts Warehouse robots 	<ul style="list-style-type: none"> Smart Labels Smart Merchandising 	<ul style="list-style-type: none"> Inventory Tracking Predictive Planning Warehouse Automation 	<ul style="list-style-type: none"> Wearables 	<ul style="list-style-type: none"> Beacons Social-media monitoring Mobile Apps
Energy & Utility	<ul style="list-style-type: none"> Connected Batteries Smart Powerhouses Smart grids 	<ul style="list-style-type: none"> Leakage Monitoring Connected HVAC systems Intelligent sprinkler systems 	<ul style="list-style-type: none"> Storage Conditions Monitoring Power Theft detection and Monitoring System 	<ul style="list-style-type: none"> Smart Helmets Geofencing Health & Safety monitoring 	<ul style="list-style-type: none"> Smart metering Energy Use recommendations Smart decision making

Industry adoption by major IoT areas: Products, assets and logistic based solutions are gaining high attention among Industry players while niche labor safety use cases for Oil & Gas and Energy verticals is driving connected workforce segment

Industry / IoT application areas	CONNECTED ASSETS	CONNECTED PRODUCTS	CONNECTED LOGISTICS	CONNECTED WORKFORCE	CONNECTED CUSTOMERS
Automotive	High	High	High	Low	Low
Industrial	High	High	High	Medium	Low
Retail	Medium	High	High	Medium	High
Energy & Utility	High	Medium	Medium	High	High
BFSI	Not applicable	High	Not applicable	Not applicable	High
Healthcare	Low	Medium	Low	Low	Medium
Oil & Gas	High	Medium	High	High	Low
Telecommunication	Medium	Medium	Low	Not applicable	High
Media & Entertainment	Low	High	Medium	Not applicable	Medium
Consumer goods Mfg.	High	Not applicable	High	Low	Low
Consumer Electronics	Medium	High	Low	Low	High
Education	Medium	Medium	Not applicable	Not applicable	Low
Agriculture	Medium	Medium	Medium	Low	Low

Adoption intensity

High

Medium

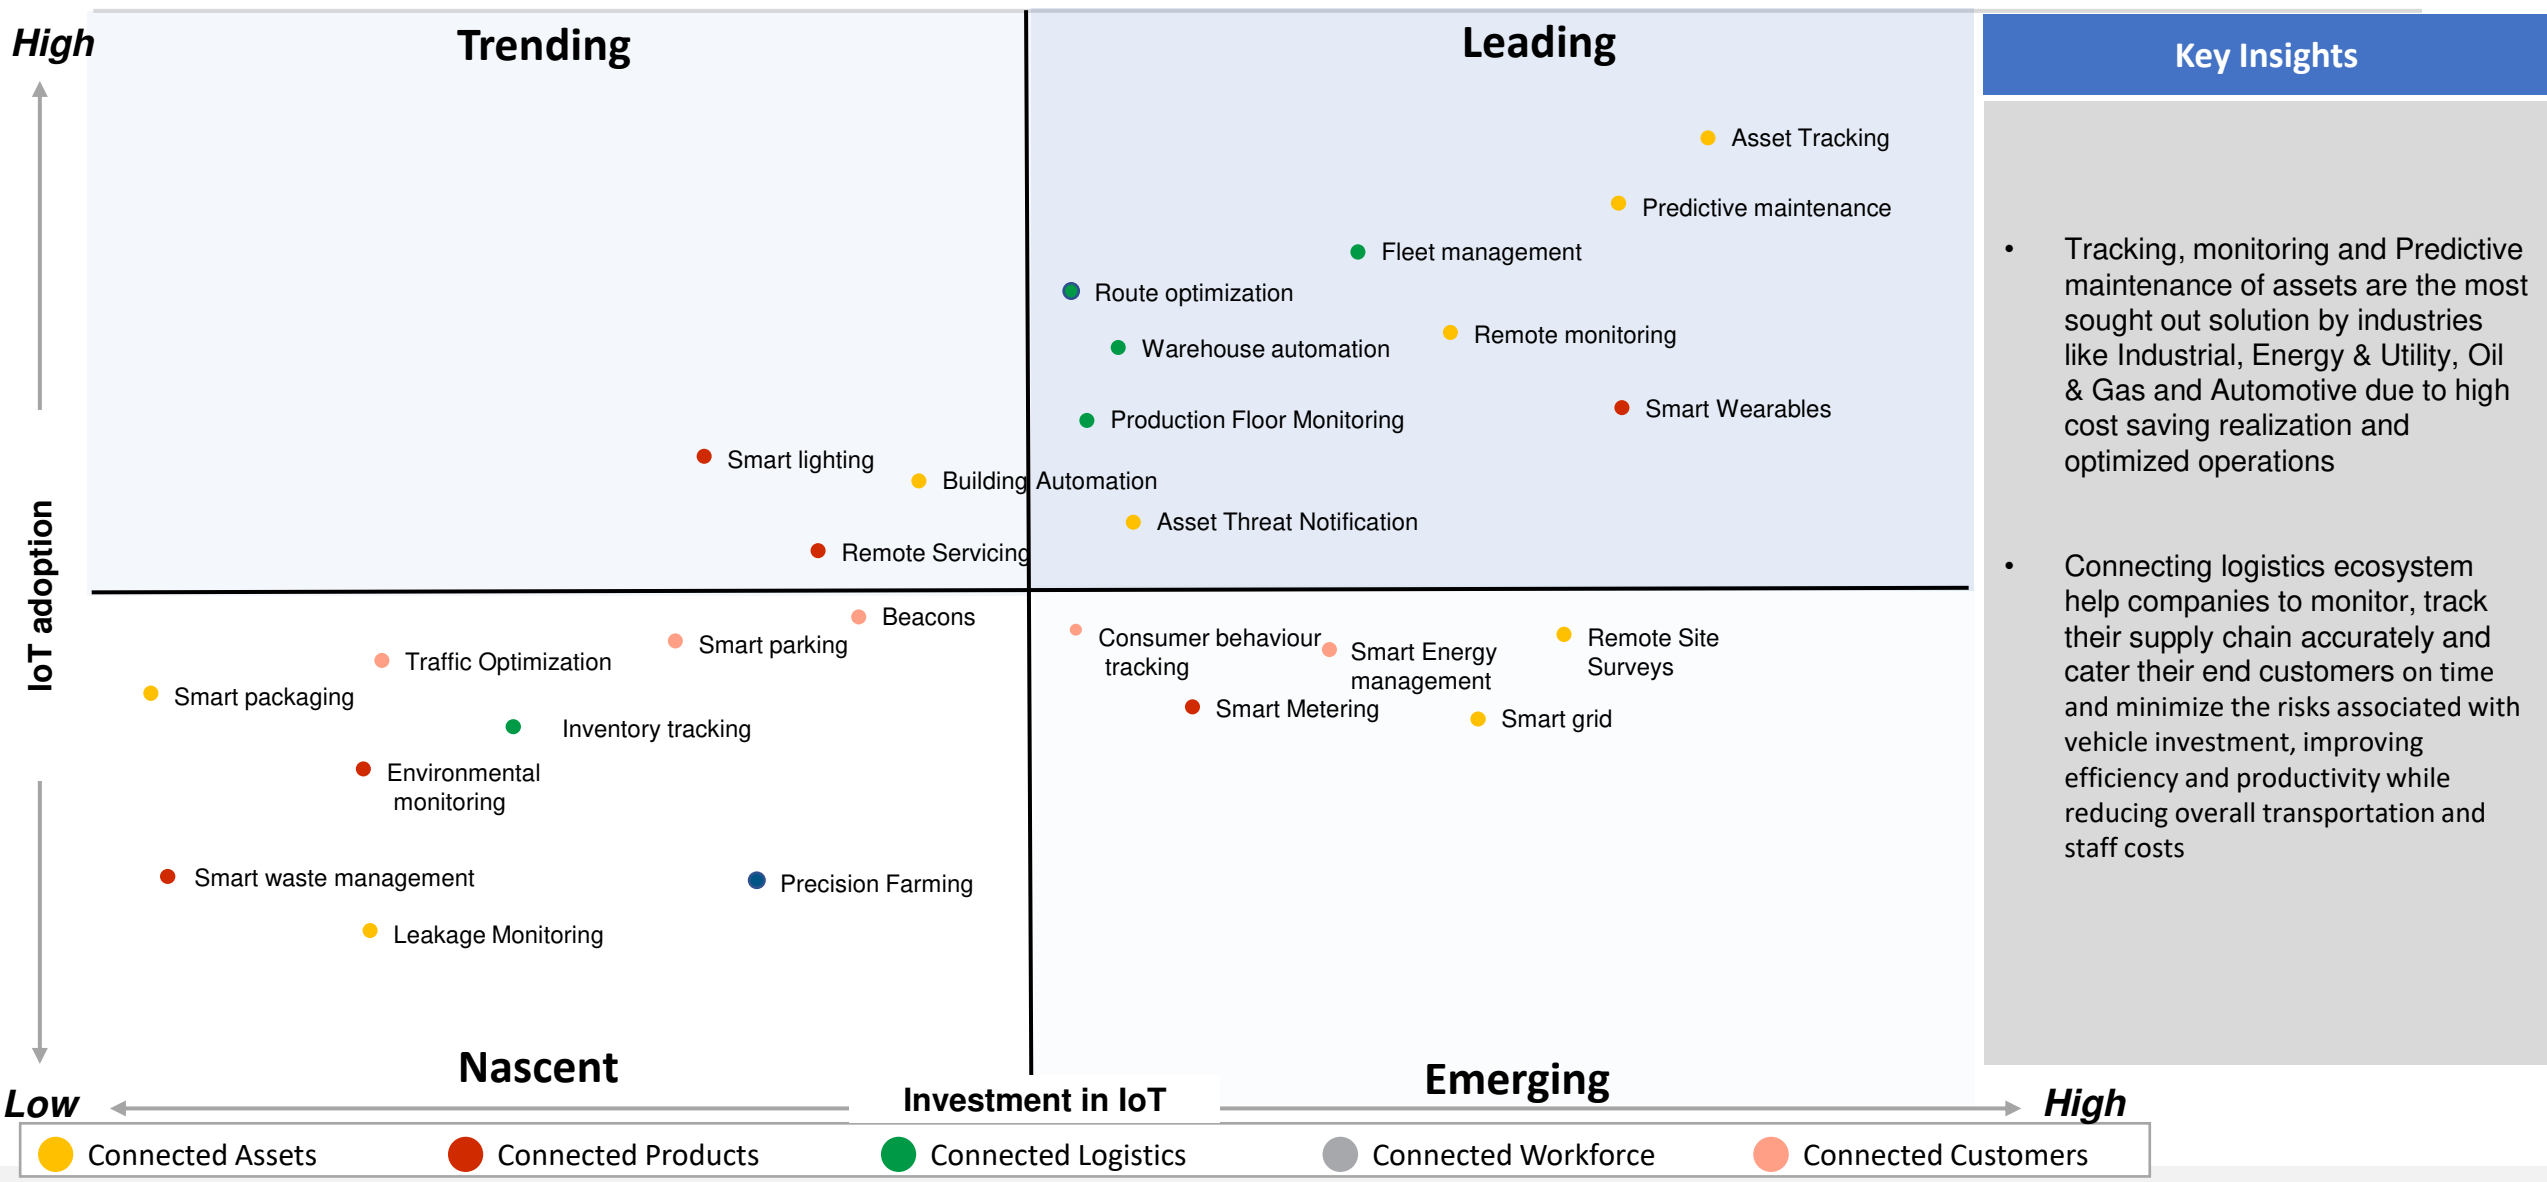

Low

Not applicable

Digital Maturity of IoT based Use cases/ applications: Logistics and Asset based connectivity solutions are integrated in high scale as they enable high operational efficiency

AGENDA

Report Profile

01	Overview of IoT ecosystem
02	IoT Application by Industries
03	Service Provider engagements and opportunities

 Topics covered in the Snippets Report

 Topics covered only in the Full Report

Topics Covered:

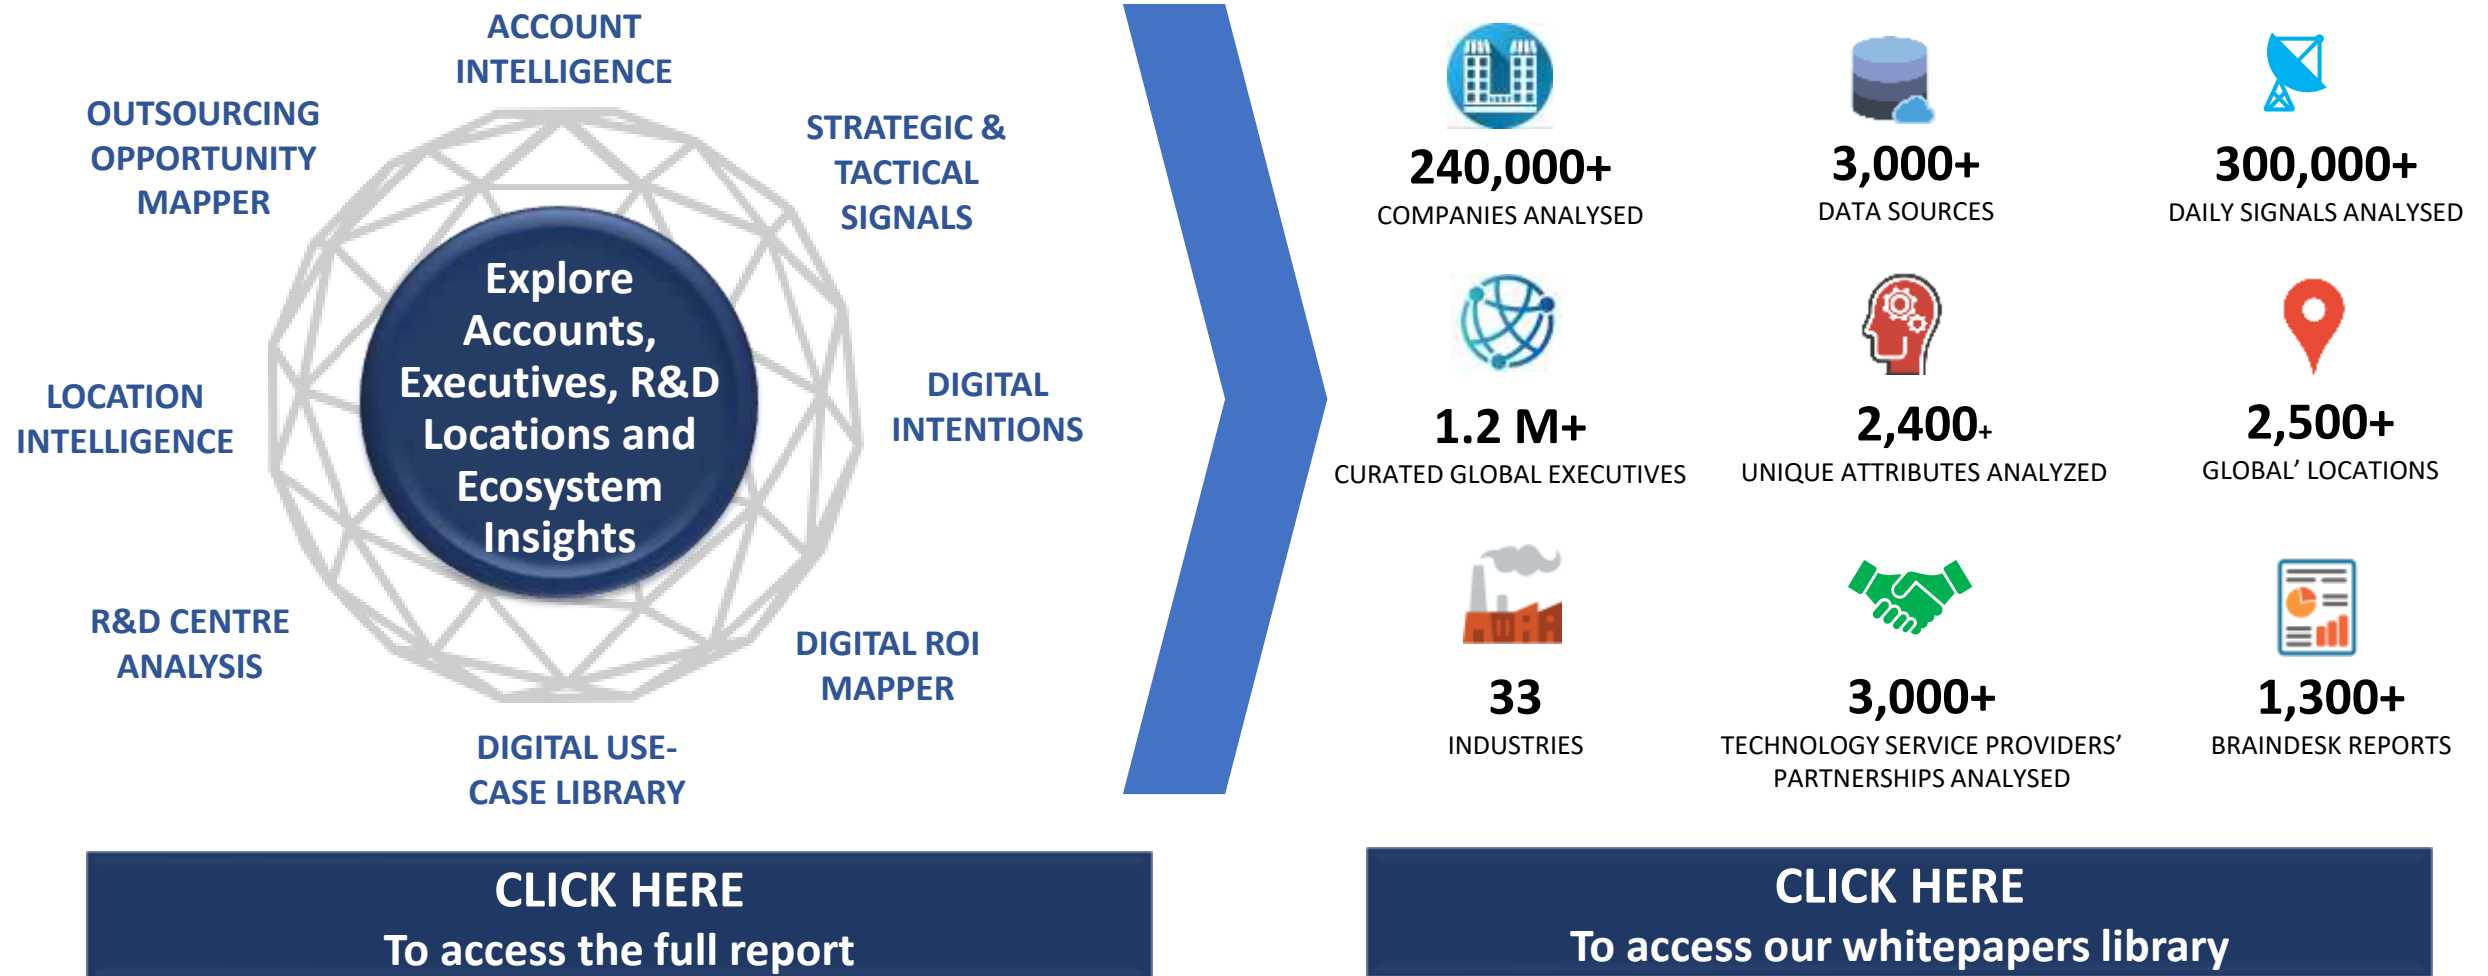

- IOT Applications by Industry
 - Automotive
 - Industrial
 - Retail
 - Energy & Utility
 - Banking & Financial Services
 - Insurance
 - Emerging Industries
- Service Provider engagements and opportunities
 - Business models of IoT service providers
 - Key Services Provider engagements
 - IoT Opportunity Propensity by Industry

These sections are covered in the Full Report
